automation
Perfectly matched components and system solutions
The dynamics of the market pose increasingly complex challenges to your production. ENGEL offers you solutions that precisely match your desired level of automation: from modular to tailor-made systems solutions.

Automation expertise at all levels: We design and supply complete production systems in which all processes, from the injection moulding machine and the robot to the automation peripherals, are perfectly matched. You can therefore rely on the highest part quality, stable processes and maximum productivity – and that your entire production is running smoothly.

Automation at ENGEL
Your partner for efficient injection moulding applications

ENGEL leads the global market for injection moulding machines. And is number 1 in the automation of entire production cells. In addition to our sales subsidiaries and our worldwide service network, more than 450 experts at ENGEL are dedicated to the development and production of modular and customised systems solutions for innovative technologies in all sectors. Our competence centres provide you with experts in applications, all certifications required and efficient overall project engineering.

Comprehensive product portfolio
The entire production cell from a single source

ENGEL develops and manufactures all essential components for the automation of your injection moulding cell. Your optimal solution is designed and built using a multitude of products and a variety of options. Experienced engineering companies supply us with selected support equipment. From the conceptual idea to implementation and service, you have a designated contact person at your side.

Optimally matched products
More than the sum of all its components

Mechanical and control integration of the individual components results in compact solutions, which function is optimised with regard to performance and user-friendliness. Many components are perfectly matched as early as during the design phase.

Over 1,900 robots per year

Over 25,000 robots and automation solutions installed

Over 300 systems projects per year
Worldwide automation centres
The consistent solutions and best service from Europe to Asia and America

Experts from our worldwide automation centres offer support in the design of your automation cell, drawing on the expertise of the entire ENGEL network. If you intend to set up production cells with the same standards in different countries and continents, ENGEL is the perfect partner for solutions and support.

More than 40 years of experience in automation
Benefit from the technology leader’s long-standing expertise

ENGEL has been developing and manufacturing injection moulding machines since the 1950s, and robots since the 1980s. Gain from the diverse applications and the well-engineered as well as continuously developed products and services. Thousands of automation cells with ENGEL robots and thousands of new applications installed each year create confidence and continue to inspire our customers.

Around 6,700 employees worldwide, 600 of which are automation experts

9 Produktionswerke in Europa, Nordamerika und Asien (China, Korea)
ENGEL automation – added value
The unique innovations for your decisive technical advantage.

As an innovative leader, our focus has always been on the continuing development of product functions and the entire line of products. We set new standards in automation technology for entire production cells with injection moulding machines. Numerous unique characteristics in mechanics, control technology and software result in faster start-ups, more efficient and precise processes, longer product life cycles and higher energy savings.
inject 4.0
Our solutions for the smart factory

Continuously increasing customer benefit has always been a top priority for ENGEL. Whether the complete integration of peripherals, customised automation concepts or the launch of the CC300 control unit generation, the optimised production cell is the focus of our development work. In addition to many innovative solutions related to mechanics, drive, electrics and pneumatics, extensive inject 4.0 functions, which significantly increase automated cell productivity in the age of Industry 4.0, have already been tried and tested in practice.

smart production
Increase productivity

- virtmould
The innovative simulation software for ENGEL machines and robots.

The virtmould program is available as an option for the ENGEL CC300 control and used to simulate ENGEL injection moulding machines and robots on a PC or laptop. virtmould gives users the ability to create, edit and test part data sets without having to interrupt the production process.

- authentig
The Manufacturing Execution System for optimal production control.

Keep production under control with this intelligent MES – it is perfect for managing data sets, optimising set-up times and fulfilling documentation requirements. With the help of its various modules, you can very easily create production plans on your PC at any time or check the status and progress of production from your desk.

smart service
Increase availability

- e-connect and e-connect.24
The ENGEL services available any time and any place.

The free ENGEL e-connect customer portal collects all the information you need for your entire system. A single login gives you access to all necessary information at any time, regardless of whether this is machine status or service activities. ENGEL e-connect.24 provides you with qualified 24/7 remote maintenance and online support. 560 service engineers worldwide help you quickly identify the problem and restore control.
smart machine
Increase process stability

■ iQ vibration control
Active vibration compensation for quick and precise positioning

Our ENGEL viper linear robots measure the vibrations at the end of the vertical axis close to the gripper using acceleration sensors and compensates for the vibration via the closed-loop control in the control unit and the servo drives. This innovation also compensates for vibrations of a robot mounted on a vibrating machine or touching the mould or an ejector. This results in shorter cycle times and higher process reliability during loading, part removal and depositing.

■ event control
Self-optimising cycle times

Our ENGEL robots use sensors to monitor analogue values, such as vibrations, vacuum and weights, and continue the process when defined values are reached. This eliminates the need for tedious adjustment and waiting times that are too long, resulting in shorter process cycle times.

■ multidynamic
Load-dependent speed optimisation for best performance

ENGEL viper linear robots optimise their speed as a function of the load and stroke. Maximum speed is achieved with lower loads and shorter strokes, while the speed is reduced with higher loads and longer strokes to meet the requirements of a stable process. This applies to both the linear and the rotation axes. The result is a perfect blend of cycle times, precision and durability.

■ efficiency control
Cycle-time dependent speed optimisation.

ENGEL robots adjust the speed in the machine’s depositing sequence. The robot moves only as fast as required by the injection moulding cycle. This results in lower energy consumption and increased robot service life.

■ maintenance control
Permanent monitoring of robot parameters for scheduled maintenance

ENGEL robots come with a great deal of intelligence built in. If the drive temperatures change, a warning is issued and the dynamic range is reduced from a critical threshold value. Reliable and precise lubrication by means of a controlled central lubrication system is guaranteed, as is monitoring and signalling when lubricants need changed. In any case, uninterrupted production is guaranteed until the next scheduled maintenance window.
integrated control
The integrated control concept for machine, robot and auxiliary equipment

ENGEL robots are available as stand-alone devices with their own control unit and Euro-map 67 interface to the injection moulding machine. However, most customers choose the Integrated Control Concept from ENGEL for good reasons. The robot can be operated entirely from the CC300 machine panel while software variables enable an advanced signal exchange directly between the control units. The result is optimal interaction between the two devices. The same strategy is used for the integration of other intelligent auxiliary devices, such as complex feed and part removal systems or processing stations.

- Centralised, uniform operation of machines, robots and auxiliaries – less training overhead and faster commissioning
- Advanced exchange of machine data – fast and error-free cell configuration and set-up
- Joint parts data management for robot and machine – faster retooling and error prevention
- Centralised variable and message management of the entire cell – easy access for Industry 4.0 and fast trouble shooting
- Real-time synchronisation of robot and machine conditions and movements (mould, ejector, core pulls) – shorter cycle times, avoiding collisions and any number of mould functions
**integrated sequence**
The optimal programming experience for beginners and professionals

![Basis view, showing a predefined pick & place sequence](image1)

![Extended view, showing a complex sequence](image2)

**sequence assistant**
Guided and intuitive creation of simple sequences directly on the robot

Particularly for the quick set-up of simple sequences, the ENGEL control unit comes with a smart assistance system to guide the operator through the configuration of the part removal and depositing sequence.

**function library**
The extensive library of predefined sequences and practical subprograms.

Our robotics technology enables flexible use, ranging from simple pick & place applications to extensive processes including loading, quality inspection, reworking, assembly and complex depositing. ENGEL robots therefore have a large selection of predefined and extended sequences which are fully integrated in operating modes and operating menus and can be easily added or removed. Fast configuration of sophisticated automation sequences and tested stable features add value for the customer.

**Individual programming**
Free programming with macros and program structuring commands.

For professionals who prefer to set up their applications completely independently, ENGEL offers the option of intuitively creating the simplest or most complex sequences using macros and program structuring commands, like in PLC programming. This means that even the most individual customer requirements can be covered by control technology.
integrated safety
The integrated safety technology for flexible production cells

- All individual components, as well as the system solutions of ENGEL automation are already CE certified. This also facilitates the inspection of customised solutions.
- ENGEL offers built-in safety for personal protection related to heights, distances and strengths for machine and safety clearances.
- The integrated safety technology includes standardised electrical safety packages for connected or stand-alone operation of the machine and automation.
- The safety control and a safety bus system make it easy to expand the system’s emergency stop circuit:
  - Fast overview of the system’s safety status,
  - Identifying status during remote maintenance,
  - Less wiring necessary, with reduced error-proneness.

integrated mechanics
The mechatronic system design solutions for the most compact production cells

According to CE, if a machine is equipped with a robot and, specifically, if the machine is small or medium-sized, the safety gate and other parts of the safety cover must be 2200 mm high. ENGEL offers numerous options for injection moulding machines that perfectly integrate conveyor belts, chutes, and the robot itself. This is the fastest possible way we can create a safety-certified and space-saving automation cell for your application.
Ready-to-run systems solutions
The modular automation solutions
The modular automation solutions

Ready-to-run systems solutions

Numerous automation options are available for the injection moulding machine when you purchase the injection moulding machine together with the robot, or retrofit the injection moulding machine with a robot, which facilitates the interaction and safe functioning of the individual cell components.

According to CE, if a machine is equipped with a robot and, specifically, if the machine is small or medium-sized, the safety gate and other parts of the safety cover must be 2200 mm high. There are also numerous options such as conveyor belts, chutes, expansions, etc., which can be integrated directly into such a safety gate – integrated mechanical system. With or without robots, ENGEL offers a safety-certified and space-saving automation cell in the fastest possible way.

Our machines can be equipped with all commercially available signal interfaces to the robot. When the robot controls are running on the machine controller – control integrated – the ER-IS interfaces are used for advanced communication between machine and robot.

Power outlets for robots and belt conveyors supply power directly from the machine. The cycle and reversing mode of the conveyor belts are controlled by the robot controller. All local voltages and connector standards are available.
Separator and conveyor belts for free-falling parts without robot
Simple and precise positioning under the injection moulding machines

Chutes and switches in the machine are used to distribute sprues, rejects and good parts to multiple conveyor belts. These conveyor belts are available in numerous design variants and for all machine depositing sides.

IMM options
Belt conveyors for free-falling parts
GFB, WFB or ZFB
Pickers with discharge chutes integrated in the safety gate
For part production on the most compact of footprints

Durable pneumatic or dynamic servo sprue pickers are mounted on the stationary mould mounting platen. Ready-to use CE-certified solutions for discharge chutes are integrated directly into the machine guarding.
Robot and conveyor belts integrated into safety gate
For the most compact of injection moulding cells

Expanded safety gates for small and medium-sized machines are the easiest method to allow a robot to deposit parts on a belt conveyor. Combined with tie-bar-less injection moulding machines and horizontal part removal, this enables very short cycle times.

Robots and conveyor belts with integrated safety structure
Automation for large injection moulding machines made easy

The belt conveyor with its safety structure is docked to the safety gate of a standard machine using but a guide rail. Moving the belt conveyor gives access to the mould area and stops both robot and machine operation.
Robot with free-standing conveyor belts and safety guarding for all depositing sides
Standard layouts make adding a robot to a machine easy

Preconfigured standard layouts can be selected from numerous combinations of ENGEL injection moulding machines with ENGEL linear robots, depending on the depositing side (operator, non-operator, side-by-side). Safety systems, the modular cell safety technology, offers full freedom of design for individual cell layouts, ensuring perfect connection to the machine, an attractive overall design and CE certification.

Project systems solutions
Customised automation solutions
Project systems solutions
Customised automation solutions

If you are looking for more than a combination of modular automation components such as robots, conveyor belts, safety guarding, etc., the ENGEL team is happy to develop customised system solutions to meet your individual requirements.

Our specialists have access to a comprehensive modular assembly kit system with proven process modules; they additionally develop components and features in line with your specific requirements, and integrate your preferred components and standards.

Professional project implementation
From the first enquiry to providing service for your automation project

Parallel to our global network of subsidiaries for injection moulding machines, ENGEL automation centres in America, Asia and Europe are your local partners.

- Development of solutions for your individual part requirements
- Design, programming and documentation in line with your standards
- Production and commissioning at ENGEL and your global plants
- Training of operators and maintenance personnel for your independence
- Service for maintenance and repairs for maximum availability
Flexible process modules
The building blocks for short system integration times and stable production processes

Over many years, ENGEL has standardised the process steps necessary to successfully integrate customised automation solutions for injection moulding machines. Individually required components can be quickly added to pre-configured, stable running modules enabling short installation times of reliable solutions for your application.

The trend towards increasing the degree of automation with pre- and post-treatment of feed parts and injection-moulded parts parallel to the machine cycle increases the production flow, reduces the production space and staffing levels and increases your productivity.
Industry-specific reference projects
Our experience is your competitive advantage in all industries

Benefit from our many years of engineering and project expertise in a wide variety of application areas and industries worldwide.
Solution concepts for specific types of applications
Pre-developed solutions for cost effective parts logistics

While some applications require basically the same overall automation solution, a high degree of flexibility is needed when it comes to the details. We offer different basic concepts for a variety of applications, that can be adapted quickly to your individual requirements.

These concepts include configurable modules that can be combined for a tailored solution. Of course, the focus is always on achieving the smallest possible footprint while at the same time ensuring the best possible access to the machine. You will find two concrete examples on the following pages.

**EKS cavity separator**
The configurable cavity separator integrated in the safety gate

- Integrated into the expanded safety gate or the compact cell
- Replaceable module for different cavity numbers and patterns
- Configurable container trolley
- Storage function for container changes without interrupting production

**Options:**
- Automatic container trolley feed
- Chute and quality drawer integrated into safety gate

*available on request*
IML cell*
The compact solution for flexible labelling

This space-saving production cell for versatile in-mould labelling (IML) applications offers everything you need. It comprises an ENGEL injection moulding machine, an ENGEL linear robot and an ingenious labelling and part removal station with a stacking system that are integrated into the ENGEL CC300 control unit to create a complete solution. Maximum flexibility is also assured as you can use the pick & place solution with stacking system without labelling. In addition, the IML cell can be upgraded with a Vision Control system.

- The IML cell saves space at the plant, the complete installation is less than 1 meter wide.
- Easy access to the labelling magazine for inserting new labels ensures high availability.
- Easy reconfiguration makes the cell very flexible. The label cassettes can be easily replaced through the sliding table (for the production of lids, and round and rectangular cups).
- A fast and precise stacking system ensures high capacity.
- Fast mould set-up is ensured by the flexible connection to the machine and easy access to the cell.
Robots
The innovative technology optimised for all injection moulding applications
pic A
The innovative pneumatic sprue picker

ENGEL pic A is the name of the new pneumatic sprue picker, which features a swivel arm instead of the classic, rigid X-axis, allowing it to operate in the tightest spaces. The sprue picker does not need to be manually loosened and swivelled to the side for mould set-up. When completely folded in, the swivel arm lies flush against the housing and does not protrude into the mould mounting space. Maximum compatibility with the predecessor ER-USP is a matter of course, as it deposits in the same chute and is integrated with the CC300 via the same interface.
For fast mould set-up
X swivel arm folds in completely

Compatible and reliable
For a long service life
Durable and compact design
Fast and efficient operation
Integrated control – the integrated control concept for machine, robot and peripheral equipment
Simple configuration of injection moulding machine, robot and peripheral devices
Ready-to-run systems solutions – the modular automation systems
e-pic B
The dynamic servo sprue picker

Based on the technology of the proven pick & place robot e-pic Z, the e-pic B combines linear movements with a swivel arm to achieve totally new kinematics. It is in particular an economic choice for the fast removal of sprues, if the parts have to be removed manually or fall out of the machine freely.

For fast vertical stroke
800 mm linear axis with deflected belt drive

For fast cross stroke
Vertical maintenance-free 100° B-rotation axis

For fast part removal
500 mm range with horizontal, maintenance-free rotation axis and lightweight carbon arm

For easy mould change
Can be rotated out of the working range

For flexible gripper design
Sufficient pneumatic and electric interfaces

For diverse applications
Up to 1 kg parts weight

Compact design
Control cabinet integrated in the mechanics
Programmable and energy saving

ROI after 3 years of operation
Low power consumption as compared to pneumatic sprue pickers

Fast and efficient operation
Integrated control – the integrated control solution for machine, robot and peripheral devices

Can be used as a stand-alone robot
With Euromap 67 interface

Minimum maintenance cost and power consumption
All-electric
Can be used on any power grid
Single-phase multi-voltage input

Simple configuration of injection moulding machine, robot and peripheral devices
Ready-to-run systems solutions – the modular automation systems
e-pic Z
The smart pick & place linear robot

Out-of-the-box – simply plug it in, turn it on and get started: the ENGEL e-pic offers a cost-effective and energy-efficient introduction to automation. It guarantees you quick, safe and simple manipulation of the parts and together with the short intervention times, a trouble-free production process. As an added bonus the new swivel-arm kinematics make the system highly compact, saving space by integration into the injection moulding machine.

For flexible layout above movable platen
Mechanism moves only as far as the required stroke in the part removal direction

For fast part removal
580 mm X range with horizontal, maintenance-free rotation axis and lightweight carbon arm

For fast vertical stroke
750 mm Y linear axis with deflected belt drive

For flexible gripper design
Sufficient pneumatic and electric interfaces

For diverse applications
3Nm swivel axis up to 2 kg parts weight

Compact design
Control cabinet integrated in the mechanics

For fast cross stroke
Up to 1400 mm horizontal, maintenance-free Z-linear axis
Compact and efficient

Easy setup
Dynamic swivel movements with linear positioning data
Precise depositing
Including rasteriser

Fast and efficient operation
Integrated control – the integrated control solution for machine, robot and peripheral devices

Can be used as a stand-alone robot
With Euromap 67 interface

Minimum maintenance cost and power consumption
All-electric

Can be used on any power grid
Single-phase multi-voltage input

Simple configuration of injection moulding machine, robot and peripheral devices
Ready-to-run systems solutions – the modular automation systems
viper
The powerful linear robot

Benefit from our long-standing experience: ENGEL has been building high-performance linear robots since 1980. The ENGEL viper perfectly complements your efficient production cell and its innovative design gives you improved load-carrying capacity with a low dead-weight. Smart software packages ensure that all movements are perfectly harmonised.

For high stiffness, low weight, best dynamics
Laser-welded and optimised steel structure of the part removal axis

Flexible connection of diverse gripper solutions
Wide range of pneumatics, vacuum, electrics directly in the vertical axis

Space-efficient solutions
Compact control cabinet at cross carriage or universal cabinet on ground

Stable ready-made solutions, mechanically optimised
Standard pedestals and supports for all ENGEL machines

Diverse and flexible orientation solutions
Large variety of pneumatic and servo-motorised B-C-A rotation axes

One line of robots for all machines
Load carrying capacity between 6 and 120 kg
Carriages for loads between 30 and 5,500 tons
Versatile for all machine sizes

Effort-saving and synchronous parts removal
Soft-Servo – torque control of horizontal axial forces
Fast and efficient operation
Integrated control – the integrated control concept for machine, robot and peripheral equipment
Precise, fast, energy-efficient and smooth movements
smart machine/robot with all intelligent functions
Simple configuration of injection moulding machine, robot and peripheral devices
Ready-to-run systems solutions – the modular automation systems
Special viper configurations

Based on the extensive, flexible viper modular product matrix, there are special versions for longer strokes, higher speeds and the arrangement of additional axes for parts and sprue handling.

viper 12 und 20 sprue

For three plate moulds – second vertical pneumatic arm

viper 60 and 120 double arm

For tandem moulds – second vertical servo arm

viper 40 up to 120, double robot

For dual machine operation

viper side entry*

For fast side-entry applications

viper 20 speed*

For fast top-entry applications

*available on request

easix KR/TX/RX
The multifunctional articulated arm robot

Work in all dimensions: the easix articulated robot is ideally suited for positioning tasks with full freedom of orientation and for machining tasks with precise tracking characteristics. Making your production even more efficient, no matter whether you need a particularly flexible automation solution or face special requirements, such as cleanroom production.

For flexible solutions for all application fields and machines
Loads between 6 and 240 kg and ranges up to 3,900 mm

Less spare parts required, same operator and maintainer expertise
Same peripheral control modules as in the viper linear robot

High reliability and worldwide service
Sturdy mechanics from market leaders

Flexible connection of diverse gripper solutions
Wide range of pneumatics, vacuum, electrics directly in the vertical axis

Suitable for large machines and long lines
7th/linear axis for extended work area

Stable ready-to-use solutions, mechanically optimised
Standard pedestals and supports for all ENGEL machines at various mounting positions
As easy to use as a linear robot

For flexible handling tasks and precise parts processing
Full range of orientation and consistent path travel
Fast and efficient operation
Integrated control – the integrated control concept for machine, robot and peripheral equipment
Precise, fast, energy-efficient and smooth movements
smart machine/robot with all intelligent functions
Professional project management by our ENGEL team
Project automation – the customised automation solutions
easix TS
The fast SCARA robot

Ideally suited for fast pick & place tasks when sorting inserts or depositing finished parts. An additional kinematic type in ENGEL’s modular robot portfolio.

High reliability and world-wide service
Sturdy mechanics from the market leader

Flexible solutions for sorting and depositing applications
Loads up to 7 kg and range up to 800 mm

Stable ready-made solutions, mechanically optimised
Standard supports for diverse mounting positions

pick & place: separation and sorting
For minimum cycle times and high-speed tasks
Innovative four-axis robot kinematics
Fast and efficient operation
Integrated control – the integrated control concept for machine, robot and peripheral equipment
Precise, fast, energy-efficient and smooth movements
smart machine/robot with all intelligent functions
Professional project management by our ENGEL team
Project automation – the customised automation solutions

Gripper technology
Ingenious tools for inserting, removing, measuring and processing
Gripper technology
Ingenious tools for inserting, removing, measuring and processing

In order for your robot to fully utilise its potential, the robot arm and gripper have to be perfectly coordinated with each other and with the mould: The grip tools by ENGEL ensure even more efficient and productive use of the robot. Our standard grippers are the ideal solution for many different areas of applications.

ENGEL is also your best choice whenever special gripper technology is required: we have a grip on everything, and can provide you with individually designed, custom solutions. We supply everything from a single source – take advantage of our comprehensive product portfolio.

Ready-to-use end-of-arm tooling
With 2 or 4 vacuum suction pads in different sizes

Customised end-of-arm tooling*
Designed by ENGEL tailored for your application

End-of-arm tooling kits
The practical cases with a wide range of universal components for do-it-yourself assembly

*available on request
EOAT quick-change systems – efficient

Retool for a new part fully automatically or in just a few steps

Sprue cutters – robust

Pneumatic or electrical grip tools for secure hold

Weight measurement systems – precise*

Determine the part weight directly on the end-of-arm tool.

- Compact system
- Quality check and logging of weight without intermediate deposit of the part
- Reduced cycle time

*available on request
Conveyor systems
Flexible solutions for efficient parts transport
Conveyor systems
Flexible solutions for efficient parts transport

- **Everything from a single source**
  The machine and conveyor systems are perfectly integrated with each other.

- **The optimum solution for any requirement**
  ENGEL conveyor systems are available in belt, box, pallet, slide and tray versions.

- **Integrated controller**
  The conveyor system controls are integrated into the machine control unit.

- **TÜV/CE certified**
  Each conveyor system is certified by ENGEL, together with the production cell.
  This saves you time, money and risk.

- **Fast and trouble-free start-up**
  From the planning stages through to you taking over your system,
  ENGEL bears full responsibility.

- **Maximum output**
  All processes are optimised and perfectly synchronised.

- **Top ENGEL quality**
  15,000 conveyors on the market and more than 2,000 conveyors produced each year are the best reference for our expertise and competence.

The whole is more than the sum of its parts. This is why ENGEL, as a system supplier and world market leader in injection moulding technology, highly values intelligent solutions, as well as trouble-free workflows and processes. From production and automation through to the management of ready-to-ship individually packaged goods with our tried-and-trusted ENGEL conveyor systems. These are intelligent conveyor solutions, which quickly and carefully transport the high-quality moulded parts from your production cell.

Whether with or without a robot, stand-alone or as an integrated solution, in bulk or in boxes, on pallets or on trays: ENGEL conveyor systems offer exactly the right solution that gives you a decisive competitive advantage in your market.
GFB/WFB/ZFB conveyor systems
The optimised belt conveyors for free-falling parts

- Perfectly suited for the injection moulding machine
- For installation on machine operator side, non-operator side or side-by-side
- Guide plates
- Standard PVC belt, temperature resistant up to 80° Celsius
- Load capacity 12 kg/m

Options*
- Special belts
- Guide plate extensions
- Universal chute
- Height-adjustable casters
- Medical version WFB

Straight belt conveyor
GFB60

Conveying length: 1,000 to 5,000 mm
Belt width: 300 to 600 mm

Angled belt conveyor
WFB60

Conveying length: 1,000 to 4,700 mm
Belt width: 300 to 600 mm

Z belt conveyor
ZFB60

Conveying length: 1,000 to 4,700 mm
Belt width: 300 to 600 mm

*available on request
HLi conveyor systems
The conveyor technology integrated into the safety gate for viper and e-pic Z

Minimum footprint and free access

Options*:
- Reverse mode
- Clearing system with light barrier
- Guide plates/cross supports/special belts

Belt conveyor HLi
integrated into safety gate

Movable for free access
during mould change
Load capacity: 15 kg/m
Conveying length: 1,900 to 5,200 mm
Belt width: 350 to 600 mm
Belt speed: 9 m/min

Chutes integrated in expanded safety
gate HLi**

Can be extended and folded
pneumatically for free access
during mould change
Chute width: 375 mm

*available on request
** see IMM: safety gate for automation
**ESC 2 conveyor systems**
The extendable conveyor belts with integrated safety structure

- Easy to dock with the machine
- **PVC belt, temperature resistant up to 80°C** (briefly up to 100°C)

Options*:
- Control panel with clearing switch
- Guide plates/cross supports/special belts
- Docking device for safe removal if not required for production

---

**ESC 2 belt conveyor with integrated safety structure**

For best-in-class process monitoring
Polycarbonate panes including a safety tunnel for the operator side of the machine

For easy removal during mould set-up or maintenance – rollers and handles

**Load capacity:** 15 kg/m  
**Conveying length:** 3,000 to 4,000 mm  
**Belt width:** 600 to 1,600 mm  
**Height:** 2,500 mm

*available on request*
FB conveyor systems
The versatile free-standing conveyor belt in all dimensions

- Infinitely adjustable belt inclination
- Underride guard
- Depositing height infinitely adjustable 1,000 – 1,200 mm
- Standard PVC belt, temperature resistant up to 80°C (briefly up to 100°C)
- Belt speed 6 m/min

Options
- Safety tunnel
- Reversible version
- Motor mounting position changed (right, vertical)
- Control panel with clearing switch
- Light barrier (loading/unloading position)
- Baffle plates (standard height 60 mm).
- Different belt versions (e.g., anti-static, wear-resistant, temperature-resistant up to 90°C/120°C,...)
- Height adjustable – 750 mm – 900 mm (limitations for EN ISO 13857), 1,200 – 1,500 mm.
- Frequency inverter for adjusting belt speed
- Additional lock in the floor
- Cleanroom version*
- Multi-tier belt conveyor version*

FB60 belt conveyor free-standing

Load capacity: 15 kg/m
Conveying length: 1,000 to 5,000 mm (in 500 mm steps)
Belt width: 250 to 600 mm

*available on request
**FB100 belt conveyor free-standing**

**Load capacity:** 25 kg/m

**Conveying length:** 1,000 to 8,000 mm  
(in 500 mm steps)

**Belt width:** 350 to 1,600 mm  
(in 250 mm steps)

---

**EFB conveyor systems**

The individual multi-tier belt conveyor for minimum space requirements

Thanks to the multi-tier design of the belt conveyors, even more parts can be deposited in an extremely space-saving manner, enabling production on a smaller production footprint.

- Underride guard
- 2 or 3 tiers
- Lengths, widths, heights and distances individually selectable**
- Clearing system with emergency stop for each tier

---

**EFB multi-tier conveyor**

*available on request*
RFB\(^*\) conveyor systems
Flexible belt conveyors for parts with little surface contact

Options:
- Manual width adjustment

RFB belt conveyor
Underride guard
Depositing height: infinitely adjustable 1,000 – 1,200 mm
Belt inclination: infinitely adjustable
Belt speed: 6 m/min
Load capacity: 30 kg/m
PU belt: temperature resistant up to 80° C (briefly up to 100° C)
Conveying length: 2,000 to 6,000 mm (in 1,000 mm steps)
Belt width: 500, 1,000 and 1,500 mm

ECB conveyor systems
The perfect box transfer for bulk material

Diverse solutions to automatically pass on and fill cartons, boxes or small load carriers by the robot

- Operator panel for EMERGENCY STOP button
- SLC sizes:
  - KLT 6147 (600 x 400 x 147mm)
  - KLT 6280 (600 x 400 x 247mm)
- Load capacity 12 kg/tote
- Light barriers for position detection

Options
- Centring position accuracy increased to ± 1 mm
- Intermediate layers magazine integrated (not available for ECB 2/2 & 3/1)
- Cleanroom version*

\(^*\)available on request
ECB 1/1 box transfer with belt conveyor and accordion roller conveyor*

**Box orientation:** crosswise or lengthwise  
**Capacity:** 11 boxes crosswise, 9 boxes lengthwise  
2 operator sides  
**Box changing time:** 11s

ECB 1/2 box transfer system with belt conveyor and roller conveyor*

**Box orientation:** crosswise or lengthwise  
**Capacity:** 11 boxes crosswise, 9 boxes lengthwise  
2 operator sides incl. 2 safety tunnels  
**Box changing time:** 11s

ECB 2/1 box transfer system with 2 conveyor belts

**Box orientation:** crosswise or lengthwise  
**Capacity:** 11 boxes crosswise, 9 boxes lengthwise  
2 operator sides  
2 safety tunnels  
**Box changing time:** 11s

ECB 2/2 box recirculation unit 1-tiered with 2 conveyor belts*

**Box orientation:** lengthwise  
**Capacity:** 9 boxes  
1 operator side incl. 1 safety tunnel  
**Box changing time:** 12s  
Functions as belt conveyor  
Clearing switch

ECB 3/1 box recirculation unit 2-tiered with 3 conveyor belts*

**Box orientation:** crosswise  
**Capacity:** 11 boxes  
1 operator side incl. 1 safety tunnel  
**Box changing time:** 17s  
Clearing switch

*available on request
ECS conveyor systems
The ergonomic sliding tables for feeding and discharging parts

The ideal solution if you need to convey parts into or out of the production unit during the production process.

- Operating panel for open request/loading acknowledgement/emergency stop
- Light barriers for position detection
- Magazine platen support (base plate)

Options
- Cleanroom version*

ECB M intermediate layers magazine

Intermediate layer: max. 590 x 390 mm
Max. stack height: 480 mm
Stack weight: max. 5kg
Separate insertion/part removal positions

ECS 1 Sliding table single

Box orientation: lengthwise
Operation: manual or electric
Table size versions:
640 x 440 x 100 mm or 840 x 640 x 100 mm
Load capacity: 60 kg manual, 40 kg electric
Max. part height: 100 mm

ECS 2 Sliding table double

Box orientation: lengthwise
Operation: manual
Table size versions:
640 x 440 x 100 mm or 840 x 640 x 100 mm
Max load capacity: 40 kg per drawer
Max. part height: 100 mm

*available on request
ETS conveyor systems
The automatic tray servers with transfer unit for smooth transfer of bulk materials

- Stacking in the smallest spaces
- Light barriers for position detection
- Clearing switch
- Lengthwise box orientation
- SMC pneumatics components (5-8 bar operating pressure)
- Tray size: 600 x 400 mm (please refer to data sheet for minimum requirements)
- Capacity 5 trays
- Tray change time 5 s
- Max. stack weight 25 kg

Options
- Additional conveyor belts for feed and discharge of tray stacks
- Accurate tray centring for robot deposition; centring tolerance: ± 0.5 mm
- Check tray alignment external contour/internal contour
- Tray swivelling unit for correct alignment (detection of tray position)
- Enhanced unstacking function via suction pads
- Guide plates unstacking unit incl. tray orientation aid
- Independent control unit S7, operator terminal with touch screen and emergency stop (only for VIPER 1.0 or older).
- Stack height monitoring
- Signal unit (2, 3 or 4 signals)

ETS 4 tray server 2 sides

Trays loaded and unloaded: on two opposite sides of the cell
Conveyor line: with 2 tunnels and underride guard (excl. safety guarding)

ETS 5 tray server 1 side

Loading and unloading: on the same side of the cell
Conveyor line: with 1 tunnel and underride guard (excl. safety guarding)
ECP conveyor systems
The robust EURO pallet transfer unit for large parts

ECP pallet transfer unit*

- Light barriers for position detection
- **Box orientation:** lengthwise
- **Operator panel:** emergency stop and clearing switch
- **Foundation bracket**
- **Crash protection**
- **Positioning accuracy:** +/- 10 mm
- **Pallet size:** EURO DIN 1,200 x 800 x 166 mm
- **Capacity:** 3 or 5 pallets
- **Pallet change time:** 20 s
- **Weight per pallet:** 250 kg max.

ECP M pallet magazine*

- **Capacity:** 10 pallets vertically arranged
- **Box orientation:** lengthwise

*available on request
ECC conveyor systems
The universal chutes for all applications

Options:
- Cover
- Separating web
- Assembly from the top

ECC chute

Length: 1,250 to 2,000 mm
Width: 250 to 850 mm
Height: 1,150 to 1,550 mm (at the fulcrum)
Plant safety technology
Safety solutions for trouble-free production and personal protection
Plant safety technology
Carefully considered safety solutions for trouble-free production and personal protection

Safety guarding
The modular assembly kit system for individual cell configuration

An ingenious complete system offers all-round safety: ENGEL safety systems is a sophisticated personal protection system for plant construction in accordance with EN ISO 14120. You benefit from all the advantages and safety of a CE-compliant cell.

- Standard layouts for numerous machine/robot combinations – easiest availability of certified safety technology
- No time-consuming and expensive additional certification required
- Overhead protection for machine operator side design variants of the automation cells

For the best use of space for all requirements
Swivel and slide door
Widths from 750 to 1,500 mm
top closed or open

For perfect insights into the running process
Extensive selection of protective panels
Widths 250, 500, 750, 1,000 mm
or special dimensions in 50 mm increments
Height 2,500 mm,
Polycarbonate panes, or wire mesh
Cable ducts bottom, top, vertical
Flexible solutions for operating injection moulding machines with a cell
Safety package 2 for a closed and 3 for an open safety gate

For fast, safe and clean coupling
Prepared connections to the injection moulding machine

For safe removal or feeding of parts in the production process
Individually adapted openings with safety tunnel or light grid

67
compact cell*
The expandable safety gate for modular conveyor technology

Derived from the added value of the expanded HLj safety gate, compact cell, the scalable safety cell, offers the smallest possible footprint on the customer’s production floor and easy access to the mould and machine installation space; CE certification included. Since all extensions can also be easily implemented outside the standard, ENGEL offers the most compact and individual solution tailored to your needs.

For example, all ENGEL conveyor systems – such as the ECB box transfer, EFB multitier conveyor, ETS tray server or ECS safety gates – can be integrated, and this modularity gives you a quick and cost-effective application solution.

No inspection cost for the customer  
Turn-key CE safety solution

Can flexibly dock with another machine  
Standardised mechanical and electrical interfaces, suitable for crane hook

Easy access  
Conveyor systems can be pushed out of the way

Quick and inexpensive application solutions  
Modular use with box transfer, multi-tier belt conveyor, tray server, sliding drawers, …

*available on request
easicell*
The universal cell for encapsulated processing tasks

Thanks to its standardised but modular design, the ENGEL easicell makes it easy to integrate robots and processing units upstream and downstream of injection moulding, such as laser processing. These components can be quickly removed from the system to replace them with other units. Long downtimes and associated outages during production changeovers are a thing of the past.

*available on request
Processing technology
Precise products for parts processing
Processing technology
Precise products for parts processing

ENGEL offers numerous solutions for processing parts before insertion into the injection moulding machine or after part removal. In this way, completely finished products are created on an automated production cell comprising all processing steps.

infrared oven
Compact infrared ovens for efficient heating of preforms

The ENGEL infrared oven adapts to the requirements of the respective parts and is available in various sizes and with or without a sliding table. To heat up the parts in the best possible way, the heating field can be divided into various zones and controlled separately. This means that smaller parts can still be heated efficiently in a large oven if necessary. Thanks to its compact design, the oven can easily be installed in any production cell and easily transported by forklift or crane. The control unit is fully integrated into the familiar ENGEL CC300 control software and can therefore be handled intuitively and ergonomically by the operator. The setup overhead is minimal and the oven can be adapted to different preforms at any time. All process data can be constantly monitored and recorded.

- Integration of the oven control unit with the machine control unit – standardised operation for the machine and peripherals at the panel and at the hand-held unit
- Modular control of the heater panels – energy efficiency with a homogeneous surface temperature
- Pyrolysis function for material residues – self-cleaning

For heat dissipation
Optional extraction system for heating unit and sliding table

For best absorption and maximum depth effect
Heat input by infrared radiator 2.5 to 3.5 µm

For optimum setting of the clearance between the part and the heater
Height adjustment of the heater panels
vertical infrared oven
For materials that have to move from heating to the mould very quickly, the infrared oven can also be installed in a vertical arrangement near the mould on request.

For flexibility in a wide range of applications
Modular for component sizes up to 1,100 x 1,610 mm and outputs up to 175 kW

For fully automatic operation
Optional servo-controlled sliding table
Training
More efficiency in injection moulding
Training
More efficiency in injection moulding

Enhanced product quality, more stable processes and higher output with a maximum yield of good parts – a thorough understanding of the injection moulding machine, the robot, and interaction of individual process steps empowers you to get more out of your injection moulding system. ENGEL training assists you in achieving this goal. With a comprehensive programme of practical training courses available for all experience levels of your team. This ranges from seminars and specialised workshops to certified training courses.

ENGEL robotics basics (ERB)
The basic skills for operating ENGEL viper linear robots

After the seminar, participants will be familiar with the mechanical layout and the controller, and will be capable of setting up and using standard programs.

- Overview of the robot system
- Work area set-up
- Function, operation, standard programmes
- Interpreting error messages

Practical exercises: Setting up standard programmes under production conditions
Prerequisites: Basic knowledge of injection moulding machines.

ENGEL robotics advanced (ERA)
Operating ENGEL viper linear robots for advanced users

After the seminar, participants will be capable of programming ENGEL viper robot systems and also of quickly and effectively changing or adapting various sequences.

- Work area set-up
- Sequence editor basics
- Explanation of ENGEL standard sequences

Practical exercises: Creating various program sequences
Prerequisites: Good working knowledge of ENGEL viper robots and completion of the ERB seminar.
ENGEL robotics six axis (ERS)
Operating ENGEL articulated robots easix KR

After the seminar, the participants will be familiar with the build-up, the coordinate systems and operations and/or programming the six-axis robot. More complex program sequences can be created and adapted based on this knowledge.

- Overview of the robot
- Sequence editor
- Coordinate systems

Practical exercises
Prerequisite: Good working knowledge of sequence programming and seminar ERA.

ENGEL robotics control (ERC)
Control technology and maintenance of ENGEL linear robots

Effective performance of maintenance tasks on ENGEL viper robot systems, and quick troubleshooting and error correction. After the seminar, the participants will be familiar with robot control elements and their functions, and will have mastered troubleshooting procedures.

- System components
- Control modules, drive calibration
- Robot set-up
- Error messages and correcting errors

Practical exercises: Adjusting and calibrating, troubleshooting
Prerequisite: Good working knowledge of sequence programming, seminar ERA

In addition to the training classes described above, you can also book basic or advanced training for the ENGEL e-pic. Or why not book an individually arranged special training course for your entire team at your location?
ENGEL services
Superb individual support

- **OEM parts**
  A perfect fit, reliable, durable

- **ENGEL formula 24**
  Our formula for success and enhanced safety

- **Plasticising units**
  For improved cost effectiveness, performance and service life of injection moulding machines

- **Retrofit**
  Continuous high quality output and availability

- **ENGEL care**
  Our maintenance packages for continuous high results and optimal quality output

- **ENGEL Protect**
  Intelligent system protection by ENGEL

- **Oil maintenance unit**
  Reduced maintenance costs and less unplanned machine downtime

- **Hose service**
  Improved safety by regular replacement of hoses

- **ENGEL everQ**
  Verified process reliability of production-relevant sensor data with test certificate

- **ENGEL relocation service**
  The optimal solution for machine relocations – whether within the company, within a country or across borders

- **ENGEL training**
  Be ready for your production requirements

- **Consulting & Coaching**
  Find and leverage hidden potentials

- **e-connect**
  Your complimentary portal for ENGEL services

- **e-connect.monitor**
  Monitoring of process-critical components during operations for predictive maintenance

- **e-connect.24**
  The 24/7 remote maintenance package
A broad machine portfolio – a comprehensive service portfolio

At ENGEL, we not only offer the latest technologies and state-of-the-art production systems, but also a broad range of services to ensure your long-term success. A versatile team of experts provides service and on-site support, quickly available, high-quality retrofitting and optimisation tools, as well as professional consulting and training. With our support you get the best out of your production cells.

Support – we assist you on-site!
- save on downtime costs
- immediate worldwide 24/7 support
- expert support from the ENGEL service team
- for any ENGEL injection moulding machines no matter the generation
- for all ENGEL technologies and any control unit version

Upgrade – install reliable added value!
- for all ENGEL injection moulding machines
- individual upgrading of your machine in OEM quality
- to add and optimise functionality
- equip machines for use with new applications and technologies
- utilise machines with even greater cost effectiveness

Know-how – Boost your expertise!
- comprehensive training with a focus on knowledge transfer
- make the most of your machine’s potential
- individual seminars and training programs for you and your employees
- informative events on industry-specific topics
- take advantage of efficient, targeted and practical information, instruction and training
- either at your own facility or at one of the worldwide ENGEL training centres
